AIM

Demonstrate continuous integration and delivery by Dockerizing Jenkins Pipeline.

1. Code Implementation

Dockerfile:

```
FROM jenkins/jenkins:lts
USER root
RUN apt-get update && apt-get install -y docker.io
USER jenkins
```

Jenkinsfile:

```
pipeline {
    agent any
    stages {
        stage('Build') {
            steps {
                echo 'Building pipeline...'
            }
        }
    }
}
```

2. Command Execution

Execution of: `docker build -t custom-jenkins .`

```
user@ubuntu:~/project$ docker build -t custom-jenkins .
Sending build context to Docker daemon  2.048kB

Conclusion

Successfully implemented Dockerizing Jenkins Pipeline as required by the project specifications.
