

ANUSHKA DESAI

23070122035

Project 8- Create deployments ,services,configmaps and secrets to containerize a complete application with at least 4 microservice

1.Apply Output

```
PS C:\Users\anushka\OneDrive\Desktop\Devops-Lab-L1_2023-27\23070122035_AnushkaDesai\Project8_Microservices_Kubernetes> kubectl apply -f .
deployment.apps/backend-deployment created
service/backend-service created
deployment.apps/cache-deployment created
service/cache-service created
configmap/app-configmap created
deployment.apps/database-deployment created
service/database-service created
deployment.apps/frontend-deployment created
service/frontend-service created
secret/app-secret created
```

2.pods,deployments,services,secrets,configmaps

```

PS C:\Users\anushka\OneDrive\Desktop\Devops-Lab-L1_2023-27\23070122035_AnushkaDesai\Pro
ject8_Microservices_Kubernetes> kubectl get pods
NAME                                READY   STATUS    RESTARTS   AGE
backend-deployment-68df9978cd-ffbpz 1/1     Running   0           2m7s

ject8_Microservices_Kubernetes> minikube service frontend-service

```

NAMESPACE	NAME	TARGET PORT	URL
default	frontend-service	80	http://192.168.49.2:30082

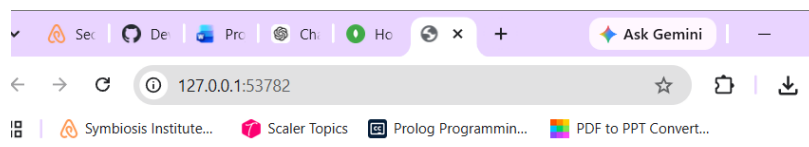

🔗 Starting tunnel for service frontend-service.

NAMESPACE	NAME	TARGET PORT	URL
default	frontend-service		http://127.0.0.1:53782

🌐 Opening service default/frontend-service in default browser...

! Because you are using a Docker driver on windows, the terminal needs to be open to run it.

3.Frontend page

Welcome to nginx!

If you see this page, nginx is successfully installed and working. Further configuration is required for the web server, reverse proxy, API gateway, load balancer, content cache, or other features.

For online documentation and support please refer to nginx.org.
